Notice: 【The split function needs to be purchased and customized】

The split method is as follows:

1. Put the doll in a flat position
2. Put the thumb and forefinger into the joint of the leg, catch the buckle inside and push up, and pull back with the other hand.

4. Done.
3. Until the leg splicing is separated

【HEATING FUNCTION】

1. How to use warming: place the doll in a flat position, connect the power adapter, connect one end of the adapter to the doll heating interface, and connect the other end to the household electricity, then the doll will be in a heating state. After about 45 minutes, the power was manually cut off. At this time, a comfortable temperature will be generated inside the doll. It can be used after power off. (Special attention: the doll can only be heated when it is lying flat before heating),
2. Input voltage: input voltage 110V-250V wide voltage
3. Output voltage: 24V/48V
4. Heating time: 60-90 minutes, depending on the thickness of the doll, you can appropriately increase the heating time (less than 1 hour) or wrap the whole body of the physical doll with a blanket (heating is less than 40 minutes) to achieve rapid heating effect .
5. Heat preservation time: The heat preservation time of the lower epidermis is 80 minutes to 120

minutes. Note: 【The heating function needs to be purchased and customized】

【PRECAUTIONS FOR HEATING】

1. The maximum temperature of the doll is about 38 degrees Celsius, which is equivalent to the temperature of the human body. It is strictly forbidden to use physical dolls during the heating process. You must cut off the power and unplug the plug and use your fingers to detect the temperature of the lower body and the surface of the doll to ensure that the temperature is suitable (the lower body is not cold) , can only be used under the premise that it will not cause harm to the user.
2. The charger should be placed in a ventilated place for heating. It is forbidden to heat up when it is covered with anything. During charging and heating (within the specified heating time), if the charger is found to be too hot (more than 70 degrees outside the temperature tolerance range), please unplug the main power plug of the charger immediately to stop charging and heating, and continue heating at intervals of 10 minutes. If the temperature is found to be too hot again Please do not use it if it is high, and send it back to the manufacturer for replacement.
3. It is strictly forbidden to heat up for more than 90 minutes on a single charge. In order to avoid the failure of the thermostat due to long-term heating, the temperature will continue to rise, and the damage to the doll and other property losses will be borne by the user.
4. Covering the blanket can achieve rapid heating. The time of covering the blanket during the heating process is not allowed to exceed 30 minutes, and the charging time for a single heating of the doll is not allowed to exceed 60 minutes, and the interval between two charges should be more than 40 minutes.
5. Occasionally, the temperature of the lower body of the doll does not rise enough, and it can be used together with a USB heating stick to achieve a rapid heating effect of the lower body.

Standing function: Compared with the conventional model, it can stand, and the posture is more diverse and flexible. Standing needs to rely on something.

Note: 【Standing function needs to be purchased and customized】
